Ahmed Farag

Backend & DevOps Engineer

Cairo, Egypt · ahmed.faragg1211@gmail.com · +20 101 251 9946
linkedin.com/in/ahmed-farag-2aa7a5203 · github.com/AhmedFarag12

SUMMARY

Software engineer focused on backend development and DevOps, building, deploying, and operating reliable, scalable applications. Experienced in designing clean server-side architectures and taking them to production through containerization, CI/CD, infrastructure as code, and monitoring. Owns a live production platform end to end, from code to server operations.

EDUCATION

Bachelor of Computer Science
Higher Technological Institute, 10th of Ramadan City · 2022

EXPERIENCE

Back-end Developer — Nahr Development Software and Marketing Company May 2025 – Present
Remote

- Develop and maintain secure, scalable web applications and RESTful APIs with PHP and Laravel.
- Deploy and maintain Laravel applications on Linux VPS and cPanel/Apache servers, including real-time WebSocket services (Laravel Reverb), queue workers, and scheduled jobs.
- Design and optimize database schemas for performance and scalability.
- Apply clean architecture principles to keep code reusable, testable, and maintainable.

Back-end Developer — Tech Village Software and Marketing Company Oct 2024 – Mar 2025
New Cairo, Egypt

- Built server-side applications with PHP and Laravel and integrated third-party APIs to extend platform features.
- Managed and optimized MySQL databases with a focus on query performance.
- Debugged and resolved production issues to keep applications reliable.

TECHNICAL SKILLS

Cloud	AWS (EC2, VPC, S3, IAM)
Containers & Orchestration	Docker, Docker Compose, Kubernetes
IaC & Configuration	Terraform, Ansible
CI/CD	Jenkins, GitHub Actions
Monitoring	Prometheus, Grafana
Servers & Hosting	Linux (Ubuntu), Nginx, Apache, Dokploy, cPanel
Scripting & Languages	Bash, Python, PHP, JavaScript
Back-End	Laravel, Node.js, NestJS, Express.js, REST APIs, WebSockets, Queue Workers, Cron Jobs
Databases	MySQL, MongoDB, Redis
Front-End	React.js, Vue.js, Tailwind CSS, Livewire
Integrations	Payment Gateways, Twilio, Firebase, RabbitMQ, FFmpeg, Bunny.net
Version Control	Git, GitHub

DEVOPS PROJECTS

Zaker — Online Learning Platform
zakereg.com · github.com/AhmedFarag12/LMS-System

- Built and operate an online learning platform for students and teachers with NestJS and MongoDB, serving real users.
- Deployed on a self-managed Ubuntu VPS with Docker and Dokploy, with MongoDB self-hosted on the same server.
- Integrated Bunny.net Stream for video hosting and delivery.
- Run a controlled release workflow: changes pushed to GitHub, then deployed to production on demand.

Chat System — End-to-End DevOps

github.com/AhmedFarag12/chat-system-DevOps · NestJS · Docker · Kubernetes · Terraform · Ansible · Jenkins · AWS

- Built a real-time chat backend with NestJS, Socket.io, MongoDB, and Redis, containerized with Docker and Docker Compose.
- Wrote Kubernetes manifests (Deployment, Service, ConfigMap, Secrets, PVC) for a multi-service deployment of the app, Redis, and MongoDB.
- Provisioned the AWS infrastructure with Terraform and automated server configuration with Ansible.
- Built a Jenkins CI/CD pipeline: build, test, push the image to Docker Hub, then roll out to Kubernetes automatically, validated on a live cluster.

Job Queue Management System — DevOps Deployment

github.com/AhmedFarag12/Job-Queue-DevOps · NestJS · BullMQ · Docker · Ansible · Prometheus · Grafana

- Built a NestJS job queue backend with JWT auth, BullMQ/Redis, MongoDB Atlas, and retries with exponential backoff.
- Containerized it with Docker Compose and automated Ubuntu VM deployment with an Ansible playbook and a Bash setup script.
- Added Prometheus and Grafana monitoring with a dashboard provisioned as code, validated on a live VM.

BACKEND PROJECTS

MAS-FM — Home Services Platform

mas-fm.nahrdev.com · Laravel · MySQL · Payment Gateways · Firebase

- Built a modular Laravel platform with RESTful APIs for a mobile app and an admin dashboard, using Repository and Service architecture.
- Implemented OTP and Sanctum auth, booking and technician assignment, order tracking, loyalty points, promo codes, referrals, multilingual CMS, and role-based access control.

Full Day 24 — Day-Use Hotel Booking Platform

App Store · Laravel · MySQL · Payment Gateways · Twilio · Firebase

- Built a booking platform for day-use accommodations, bookable by the hour or as full-day stays.
- Implemented property listings, availability, booking management, host property management, and flexible pricing per booking duration.

ASAD — Real Estate Management Platform

App Store · Laravel · MySQL · Vue.js · FFmpeg · Twilio · Payment Gateways · Firebase

- Built a platform for exploring property projects and units and requesting pricing, with a role-based admin dashboard.
- Integrated live camera streaming with FFmpeg for property visualization.

Airgate — Hajj Pilgrim Logistics and Tracking System

Google Play · Laravel · MySQL · Payment Gateways · Firebase

- Built a system for a shipping company to track pilgrim movements, accommodation assignments, and baggage.
- Delivered real-time dashboards on pilgrim locations and service allocation, with strict data integrity and security for sensitive records.

COURSES

CLS Learning Solutions — PHP, OOP, Laravel, MySQL, RESTful APIs

Senior Steps — HTML, CSS, JavaScript, React.js

LANGUAGES

Arabic — Native

English — Professional working proficiency
